

Playing with Jupyter Notebook

I used the shortcut '2' from command mode to create this header

```
In [1]: 1 name = input("What's your name?")
        2 print("Hi " + name + "!")
```

```
What's your name?Kennedy
Hi Kennedy!
```

Here's a header

Here's some text with a word in **bold**

Here's a sub-header

Here's some italic text. And here

- is
- a
- bullet
- list

~~this is a strikethrough~~

```
In [2]: 1 print('This is a code cell.')
```

```
This is a code cell.
```

I am practicing switching between command mode and edit mode. I was able to enter edit mode by pressing enter

```
In [5]: 1 import numpy as np
        2 aNumber = np.random.randn()
        3 print(aNumber)
```

```
-0.3853656774872313
```

```
In [ ]: 1
```
